Ahoy Karthikeyan, welcome to

Learn to build your first SMS app by following these steps.

1

Get a number

2

**Send your first
SMS**

3

See an app demo

4

Follow the
tutorial

Step 2. Send your first SMS

If you are a PC user with a version older than Windows 10 version 1803, install [curl for Windows](#)

[Check out docs for](#)

cUR...

cUR...

Pow...

Copy and execute the code in your command line (Terminal) or command prompt to send an SMS to your phone number. You can expect to receive your SMS within 3 minutes.

[Copy the code](#)

On your trial account, if you are sending an SMS to someone else, [verify their number](#) first.

☐ Show auth token

```
curl.exe -X POST https
--data-urlencode "Body
--data-urlencode "From
--data-urlencode "To="+
-u ACf24386e7e4b80fd0d
```

① Replace **\$TWILIO_AUTH_T**
Auth token in Account Info

Did you receive that
message?

Yes

No
